Cartzy enables you to view and manage your products in one place, ensuring efficiency in your workflow.

Path: Products > All Products

On the Products page, you can view all the products that are added to your store along with the following information against each product:

- **Post:** It identifies if the product is posted on your Facebook page.
- **Type:** It is the category of the product.
- **SKU:** It's the stock-keeping unit that is unique to each product.
- **Vendor:** Displays the vendor of the product.
- **Inventory:** It displays the status of the product stock available in inventory.

Besides, having an overview of all your products, you can also perform some functions for

product management by using the features available on this page, such as:

- Search for a product
- Sorting the products list
- Export products' details
- Edit product quantity
- Edit product details
- View product (on your store)
- Delete a product
- Post a product to Facebook
- Sorting the products list

Search for a product

Cartzy has implemented a “**search by keyword**” functionality for its product search. You can simply type a keyword to search for the particular product(s). All the matching products will be sorted and displayed as demonstrated with an example in the image shared below.

Sorting the product list

You can sort the products list chronologically and vice versa by **clicking on the arrow** given at the top of the products list. It will sort the products by name in chronological order or reverse chronological order.

You can also sort the products by **posts, type, SKU, vendor, and inventory** by clicking on these labels respectively.

Products per page

If you scroll to the bottom of the **Products** page, you can control how many products you want to view on one page when managing products through the admin panel. You can use the **dropdown selection list** to configure the number of products you want to view at a time. By default, this value is set to **25**.

Export products' details

You can also export your products in a **CSV file**. To do so:

1. You need to click on the **Export** option given at the top left corner of the page.
You will be prompted to select the products that you want to export.
2. On the **Export Products** popup window, you can select between the following two options:
 - a. **Current page:** It will export the products that are displayed on the current view/page. **For example**, if the page currently displays only 10 products, then only those product details will be exported to the downloaded CSV file.

Also, if you search for a particular product by a keyword, and the page displays only two products in the result, then the exported CSV file will contain the details of only those two products that appeared in response to your search.
 - b. **All products:** Selecting this option will export the details of all the products that are added to your store irrespective of the current page view.
3. Click the **Export Products** button. A **CSV file**, containing the products details, will be downloaded on your computer.

Edit product quantity

There are two ways you can edit the quantity of your products to keep the inventory updated and make it reflect authentic data for the customers.

1. **Add:** It will increase the product quantity by adding the new value to the previous inventory value of the product.
2. **Set:** It will set the product inventory value to the new value that you assign to the product quantity irrespective of the previous value displayed under the product inventory.

Adding to the product quantity

1. Select the **Add** option.
2. Increase the digital value using the numeric-up-down controller.

- **Up arrow:** increases the value by 1 each time you click on it.
- **Down arrow:** decreases the value by 1 upon each click.

3. Once you have adjusted the product quantity value that you want to add to the existing inventory value of the product, click the **Save** icon.

4. The inventory value of the product will be increased by the number you selected in the numeric-up-down controller. A success message will also be displayed in a popup notification.

Setting a product quantity

You can use this feature to reset the quantity of a product to a new value. This feature comes in handy especially when you want to decrease the number of products according to the updated stock.

Example scenario:

- Actual increase in product quantity: 4 units
- You increased the product quantity by 5 units
- Previous product inventory value: 3 units
- Using the **Set** feature, you can undo the manual error in inventory updates: You set the new value to $3+4 = 7$ units.

The sequence of steps to follow:

1. Select the **Set** option.
2. Increase/decrease the digital value using the numeric-up-down controller.
 - a. **Up arrow:** increases the value by 1 each time you click on it.
 - b. **Down arrow:** decreases the value by 1 upon each click.
3. Once you have adjusted the product quantity value that you want to assign to the inventory value of the product, click the **Save** icon.
4. The inventory value of the product will be updated to the number you selected in the numeric-up-down controller. A success message will also be displayed in a popup notification.

Actions - Kebab menu icon

Under **Actions**, there is a **kebab menu icon** against each product. If you click on it, a **drop-down menu** will appear with the following options:

1. Edit Product
2. View Product
3. Delete Product
4. Post to Facebook

So, if you want to perform any of the above-listed actions on a product, click on the **kebab menu icon**, and select the desired option. More details about each feature (listed in the menu) are available below.

Edit product details

To edit a product, you can either click on the **product name**, or you can click the **kebab menu** and select the **Edit Product** option. You will be navigated to the **Edit Product** page which is the same as that which opens for **creating a product** but pre-populated with product details to which you can make modifications.

After making the desired changes to the product details, click the **Save Changes** button. Otherwise, you will lose updates that you made to the product.

Upon saving the edits, a success message will appear in a popup notifying you that the changes have been saved successfully.

View products

To see how your products look on your store website, click the **kebab menu icon** > select **View Products**.

The **product** page will open in a new tab, enabling you to see the product display in your online store.

Delete a product

To delete a product:

1. Click on the **kebab menu icon** > click **Delete Product**.
2. On the **Delete Store Product** confirmation popup window, click the **Delete Product** button to confirm your action.
3. The product will be deleted from the store, and a success notification will appear in a pop. The page will be refreshed to display the updated product list.

❏ The product deletion action is irreversible. To restore the product details, you will have to add it from scratch using the **Create Product** feature.

Unable to delete a product

You can only delete a product against which no order has been placed. If there is a product against which a customer has already placed an order, an error message will be displayed when you attempt to delete that product.

In this case, you will first need to manage/delete the order placed against that product.

Post a product to Facebook

If you are also keen on running your e-commerce business on the **Facebook** marketplace, then you can directly post your products to your **Facebook** store with a single click. To do so,

1. Click the **kebab menu icon** > select **Post to Facebook**.
2. On the Post to **Facebook** popup window, you will see that the product name and description are pre-populated.
 - You can edit the **Post Message/product description**.
 - Using the dropdown, **select** the **Facebook page** to which you want to list your product, and click **Post**.
3. The product will be listed in your **Facebook Marketplace products list**, and you will get a message of success.

Unable to post a product on Facebook

If you have not configured your **Facebook Marketplace** account with your Cartzy account, then you won't be able to select anything under **Facebook Page(s)** on the **Post to Facebook** popup window. You will get an error message instead, directing you to connect your **Facebook page** with Cartzy. So, click **Discard**, and go to **Sales Channels > Facebook Marketplace** to link your Facebook page to your Cartzy store.

Create a new product

Adding a new product to your store is straightforward. You can simply click on the **Create Product** button given at the top right corner of the **Products** page. It will navigate you to the **Add Product** form, where you can fill in the required information and **save** your new product details. [Learn how to manually add a product to Cartzy.](#)
